### **DETAILED ACTION**

1. The following guidelines illustrate the preferred layout and content for patent applications. These guidelines are suggested for the applicant's use.

#### **Arrangement of the Specification**

The following order or arrangement is preferred in framing the specification and, except for the reference to "Microfiche Appendix" and the drawings, each of the lettered items should appear in upper case, without underlining or bold type, as section headings. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) Title of the Invention.
- (b) Cross-References to Related Applications.
- (c) Statement Regarding Federally Sponsored Research or Development.
- (d) Reference to a "Microfiche Appendix" (see 37 CFR 1.96).
- (e) Background of the Invention.
  - 1. Field of the Invention.
  - 2. Description of the Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) Brief Summary of the Invention.
- (g) Brief Description of the Several Views of the Drawing(s).
- (h) Detailed Description of the Invention.
- (i) Claim or Claims (commencing on a separate sheet).
- (j) Abstract of the Disclosure (commencing on a separate sheet).
- (k) Drawings.
- (l) Sequence Listing (see 37 CFR 1.821-1.825).

The heading for the drawings on page 7 and heading for detailed description of the invention on page 8 are required.

2. The abstract of the disclosure is objected to because the inclusion of legal phraseologies such as "comprises" on line 1 and "means" on lines 2 and 3. Correction is required. See MPEP § 608.01(b).

Art Unit: 3653

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Japan'979.

Japan'979 discloses an apparatus for dry physical separation of particulate material. The apparatus comprises an inclined separating surface 12 having an upper and lower edges; an oscillation means 13 for inducing an inherently non-linear oscillatory motion of the separating surface (note the bouncing material as shown in Fig. 4); a plurality of springs 13c; and an introduction means 31 having a variable speed motor for introducing the particulate material onto the surface. The oscillatory motion can be elliptical or eccentric motion. Japan'979 further shows a plurality of separating surfaces 12 and 22.

5. The IDS (PTO-892) filed on August 27, 2001 has been considered. A copy is attached hereto.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Satake, Nicols et al. and SU'818 are cited to show other pertinent art.

7. Any inquiry concerning this communication should be directed to Examiner Tuan Nguyen at telephone number (703) 308-3664.
